

Dmitriy Bardin

Senior / Lead Frontend Engineer | React, Next.js, TypeScript

Krasnodar, Russia | 8+ years fully remote | open to relocation | dmitriy.bardin90@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Senior Frontend Engineer with 13+ years in software development, focused primarily on frontend since 2016. I build enterprise and data-intensive web applications with React, Next.js, and TypeScript, with a strong background in complex business logic, data integrations, and databases.

Experience includes owning the frontend of an enterprise product, migrating Angular applications to React, contributing to greenfield architecture and technology choices, and delivering customer-facing fintech and public-sector analytics products. I work cross-functionally with Product, Design, Backend, and QA and can break down and delegate engineering tasks.

Open to Senior/Lead roles that combine hands-on engineering with technical and people leadership. Based in Russia; open to worldwide remote contractor/B2B arrangements and relocation with visa sponsorship.

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Angular, Redux, RxJS, Vue.js, HTML, CSS

Architecture: Frontend architecture, enterprise applications, scalable UI, migrations, maintainability, performance

API & Data: REST APIs, GraphQL, OpenSearch, SQL, PostgreSQL, MS SQL, MySQL, Teradata

AI & CMS: Hugging Face language models, LLM integrations, semantic-search prototyping, Strapi

Testing & Tooling: Jest, Vitest, Vite, Webpack, Git, Jenkins, Docker, CI/CD

Leadership: task decomposition and delegation, mentoring, cross-functional collaboration, technical decision-making

PROFESSIONAL EXPERIENCE

Senior Frontend Developer - Arenadata 2022 - Present

Enterprise data-management and infrastructure products.

- Owned frontend development and maintenance of the Angular-based Arenadata Cluster Manager (ADCM) after joining the team, as the only engineer on the team with the Angular expertise required to support the product.
- Contributed to the Angular-to-React migration of ADCM in a 3-engineer frontend group led by the Team Lead, improving code cleanliness, maintainability, and application performance.
- Develop and support multiple Arenadata products, collaborating directly with Product, Design, Backend, and QA; break down complex frontend work and contribute to technical decisions when needed.
- Helped build a greenfield corporate web platform in a 5-person team using Next.js and Strapi; contributed to stack selection, worked across both the frontend and CMS layers, evaluated third-party Strapi integrations, and built a proof of concept for a diagram engine.
- Researched approaches to associative documentation search, compared candidate technologies, presented options to the Team Lead, and built an OpenSearch prototype using Hugging Face language models; validation confirmed the concept on test data and exposed quality/tuning limitations on production data.
- Mentored one junior engineer and delegated development tasks when appropriate.

Tech: React, Next.js, TypeScript, Angular, Strapi, OpenSearch, REST APIs, Recharts, Vue.js

Senior Frontend Developer - M.Video - Eldorado 2021 - 2022

Customer-facing consumer financing product for a major retail e-commerce platform.

- Served as the primary frontend engineer for a pre-release credit and installment selection experience that consumed bank offers and let online-store customers choose a financing option.
- Implemented complex business rules, validation, and financing user flows and integrated the frontend with backend services through GraphQL.
- Drove day-to-day frontend implementation of the product through its pre-release development stage.

Tech: Angular, TypeScript, RxJS, GraphQL

Frontend Developer - PARMA Technologies Group 2018 - 2021

Analytics and information systems for Russian public-sector organizations.

- Worked on several public-sector systems; the primary project handled resident requests and complaints for Moscow and the surrounding region.
- Built analytics and monitoring interfaces, including address-based map visualization for operational data.
- During COVID-19, contributed features for tracking data related to reported infections and recoveries.
- Occasionally worked beyond the frontend boundary to help teammates investigate Java backend issues.

Tech: Angular, JavaScript, Vue.js, GraphQL, PostgreSQL, maps and data visualization

Frontend Developer - Tander Oct 2016 - Jun 2018

Internal data-processing and aggregation systems.

- Built an internal web application from scratch with one backend engineer to collect data from distributed servers, run calculations, generate results and attachments, and notify responsible employees.
- Owned the frontend implementation and reported project status directly to the sector manager; the application supported configurable output structures and processing-failure alerts.
- Continued contributing to database-related work, data migration, and query optimization when required.

Tech: JavaScript, SQL, web development, database integrations

Database Developer - Tander Jan 2014 - Oct 2016

- Developed and supported databases, optimized queries, performed data migrations, and prepared data for calculations and internal management tools.
- Partnered with web developers to provide data and integrations for internal web applications.

Tech: SQL, MS SQL, PostgreSQL, MySQL, Teradata, ETL/data migration

Full Stack Developer - Kuban State Agrarian University Apr 2013 - Dec 2013

- Developed web and database components for a public-sector natural-resources accounting system created during preparations for the Sochi 2014 Olympics.

EDUCATION & LANGUAGES

Kuban State Agrarian University, 2007 - 2012 - Engineer, Information Systems and Technologies

Languages: Russian - native; English - C1 (goFLUENT assessment); French - basic

Work setup: 8+ years of full-time remote work; open to global contractor/B2B arrangements and relocation with visa sponsorship.
