

Dmitriy Bardin

Senior / Lead Frontend Engineer | React, Next.js, TypeScript

Krasnodar, Russia | 8+ years fully remote | open to relocation | dmitriy.bardin90@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Senior Frontend Engineer with 13+ years in software development, focused primarily on frontend since 2016. I build enterprise and data-intensive web applications with React, Next.js, TypeScript, Angular, and Vue 3.

My strengths are technical autonomy and ownership of individual frontend areas, complex configuration/data UIs, backend/API integration, subsystem-level architecture, technical research/POCs, and performance troubleshooting. I perform team-wide code reviews and have mentored a junior frontend engineer.

Targeting Senior and hands-on Lead roles with growing technical leadership responsibilities. Based in Russia; 8+ years fully remote and open to worldwide contractor/B2B work or relocation with visa sponsorship.

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Angular, Vue 3, Vuex, Redux, RxJS, TipTap, HTML, CSS

Architecture: subsystem-level frontend architecture, enterprise/data-intensive apps, complex configuration UI, migrations, maintainability, performance troubleshooting

API & Data: REST APIs, GraphQL, OpenSearch, SQL, PostgreSQL, MS SQL, MySQL, Teradata

R&D & CMS: semantic search, OpenSearch, Hugging Face models, Strapi, technical research and POC/prototyping

Testing & Tooling: Vitest (mocks, async, component/integration-style scenarios), Jest, CI/CD, Vite, Webpack, Git, Jenkins, Docker

Technical Influence: team-wide code review, mentoring, technical guidance, task decomposition, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Frontend Developer - Arenadata Apr 2022 - Present

Enterprise data-management products and web platforms for data infrastructure.

- In 2022-2023, independently maintained and extended the Angular version of ADCM as its sole frontend engineer: chose implementation approaches, made frontend architecture decisions, built complete sections with complex multi-level configuration UIs, and worked directly with backend engineers on API changes.
- As part of the ADCM Angular-to-React migration team, contributed to architecture decisions, performed continuous code reviews, and implemented a hierarchical dynamic tree for complex configuration UI; the migration improved maintainability and made the codebase easier to evolve.
- On Arenadata's corporate web platform, contributed to technology selection and proposed Next.js; worked across Next.js and Strapi, introduced TipTap, researched Strapi custom-component capabilities, implemented pages, and fixed defects.
- Extracted the corporate UI kit into a reusable repository for React and Next.js projects; independently designed and nearly completed a TypeScript/CSS POC for a reusable responsive diagram engine supporting complex layouts, connections, and animations.
- Independently researched a free semantic-search approach for documentation: upgraded OpenSearch, evaluated Hugging Face models, implemented model deployment/preparation and semantic-query tooling, and optimized the long-running preparation workflow; the POC validated the hypothesis on test data and exposed quality limitations on more realistic data.
- Since Jan 2026, contribute to the Apache Amoro frontend with Vue 3/Vuex: ramped up on a large legacy codebase, choose implementation approaches independently, coordinate API/data-format changes with backend engineers, evaluate Recharts, and troubleshoot excess requests, re-renders, slow UI, and heavy computations.
- Perform regular code reviews across the frontend team, covering architecture, maintainability, decomposition, naming, quality, and performance; built complex Vitest tests with mocks, async scenarios, and multiple application states that run in CI; mentored a junior frontend engineer.

Tech: React, Next.js, TypeScript, Angular, Vue 3, Vuex, Strapi, TipTap, OpenSearch, Hugging Face, Vitest, REST APIs, Recharts

Senior Frontend Developer - M.Video - Eldorado 2021 - 2022

Customer-facing consumer financing product for a major retail e-commerce platform.

- Served as the primary frontend engineer for a pre-release credit and installment selection experience that consumed bank offers and let online-store customers choose a financing option.
- Implemented complex business rules, validation, and financing user flows and integrated the frontend with backend services through GraphQL.
- Drove day-to-day frontend implementation of the product through its pre-release development stage.

Tech: Angular, TypeScript, RxJS, GraphQL

Frontend Developer - PARMA Technologies Group 2018 - 2021

Analytics and information systems for Russian public-sector organizations.

- Worked on several public-sector systems; the primary project handled resident requests and complaints for Moscow and the surrounding region.
- Built analytics and monitoring interfaces, including address-based map visualization for operational data.
- During COVID-19, contributed features for tracking data related to reported infections and recoveries.
- Occasionally worked beyond the frontend boundary to help teammates investigate Java backend issues.

Tech: Angular, JavaScript, Vue.js, GraphQL, PostgreSQL, maps and data visualization

Frontend Developer - Tander Oct 2016 - Jun 2018

Internal data-processing and aggregation systems.

- Built an internal web application from scratch with one backend engineer to collect data from distributed servers, run calculations, generate results and attachments, and notify responsible employees.
- Owned the frontend implementation and reported project status directly to the sector manager; the application supported configurable output structures and processing-failure alerts.
- Continued contributing to database-related work, data migration, and query optimization when required.

Tech: JavaScript, SQL, web development, database integrations

Database Developer - Tander Jan 2014 - Oct 2016

- Developed and supported databases, optimized queries, performed data migrations, and prepared data for calculations and internal management tools.
- Partnered with web developers to provide data and integrations for internal web applications.

Tech: SQL, MS SQL, PostgreSQL, MySQL, Teradata, ETL/data migration

Full Stack Developer - Kuban State Agrarian University Apr 2013 - Dec 2013

- Developed web and database components for a public-sector natural-resources accounting system created during preparations for the Sochi 2014 Olympics.

EDUCATION & LANGUAGES

Kuban State Agrarian University, 2007 - 2012 - Engineer, Information Systems and Technologies

Languages: Russian - native; English - C1 (goFLUENT assessment); French - basic

Work setup: 8+ years of full-time remote work; open to global contractor/B2B arrangements and relocation with visa sponsorship; targeting Senior / hands-on Lead Frontend roles.
